

Protect the Integrity of Clean Energy Initiative I-937

Washington's Initiative 937, passed by voters in November 2006, requires the state's major utilities to gradually increase the amount of new renewable resources in their electricity supply to 15 percent by 2020. Electric utilities also must acquire all cost-effective energy efficiency in their service territories beginning in 2010.

Importance of I-937

Washington needs both energy efficiency and new renewable resources to meet future energy needs and avoid construction of polluting power plants. Energy efficiency is the lowest cost resource available and many renewable resources, such as wind power, already are cost-competitive with traditional power sources. Increasing our state's reliance on clean energy will:

- Stimulate rural economic development
- Create jobs
- Protect against future price shocks due to rising fuel, infrastructure and carbon costs
- Save money for consumers
- Help meet the state's climate action goals

In 2009, the state legislature considered revisions to I-937, but no changes were enacted. Additional attempts to modify the peoples' initiative are expected this session. *Any legislative changes should adhere to the key principles below and be narrow in scope. At a minimum, the law must be maintained and should be strengthened.*

To protect I-937 this legislative session, ask your legislators to:

- **Preserve voters' intent to increase development of clean and affordable energy.** Washington is relying on the provisions of I-937 to meet the state's critical climate action targets.
- **Not weaken the law before utilities have even had to comply.** Most states that have modified their renewable energy standards have strengthened the laws. In 2007 alone, six states *increased* their renewable energy targets. Oregon recently passed a 25% by 2025 standard and California established a 33% by 2020 standard.
- **Ensure any modifications are narrow in scope to maintain the integrity of the law.**
- **Avoid any unintended consequences.** I-937 has many interlinked components. Legislative proposals to change one small element could create unintended ripples throughout the law.
