Clean today. Cleaner tomorrow.™
Idaho Power’s Energy Mix

Long-Term Purchases: 19.3%

- Hydroelectric: 46.4%
- Coal: 17.5%
- Natural Gas: 7.5%
- Other Purchases: 9.3%
- Renewables: 12.6%

About our Long-Term Purchases

Idaho Power is committed to providing clean energy to our customers and is part of the portfolio mix. We purchase Renewable Energy Credits (REC), which represent the energy produced by a renewable energy source.

The buying and selling of R.E.Cs claim the energy produced and helps others gain access to renewable energy. The RECs are usually sold to customers. We pass through the cost of these alternate energy sources and we pass on the costs to the organizations that buy the RECs from us.

National Average:

- Hydro: 17.0%
- Fuel Oil: 0.6%
- Other: 0.6%
- Nuclear: 19.3%
- Coal: 17.5%
- Gas: 34.0%
- Biomass: 0.8%
- Wind: 10.7%
- Other: 0.3%

Data Source: U.S. Energy Information Administration
“It is likely that the energy portfolio selected for 100% Zero Carbon scenario would require dozens of new high-voltage transmission lines.”

– E3 January 2019
